# Comfort for your eyes — precision for your work

The human eye is a wonderful instrument, catching images of every moment of our lives. At the same time it is extremely sensitive, and can become exhausted if it is not treated with care.

OLYMPUS has therefore made every possible effort to develop new optical systems that allow the human eye to feel comfortable and relaxed while working with stereo microscopes. This not only protects the eyes but also leads to much more precise and consistent results in daily work.

All three models — the SZX7 with its advanced Galilean optical system, the full-featured SZ61 and the versatile SZ51 — provide 3D images with true color, high resolution and no distortion.

Welcome to the comfort zone.

System diagram, dimensions & weight SZ61/SZ51 ---	17 - 18

**SZX7:** Galilean optical system using parallel light paths for outstanding performance and easy expandability.

**SZ61:** Top-of-the-line optical performance, with 1:6.7 zoom ratio.  
Model variations: SZ61-TR (with trinocular tube),  
SZ61-60 (with 60 degree observation tube inclination).

**SZ51:** Versatile, cost-efficient, ideal in all line inspection applications.

# Optical excellence and system expandability — SZX7 with Galilean optics

“Providing the optimal image for any specimen” by the adoption of the Galilean optical system and the DF (Distortion Free) objective lens series with maximum N.A. (Numerical Aperture).

### The best zoom ratio in this class

With a magnification range of 8x-56x (using 1x objective/10x eyepiece), the SZX7 offers a maximum zoom ratio of 1:7. This is the best in its class, and allows any given specimen to be observed at the most appropriate magnification.

### The best resolving power in this class

Superior quality objectives deliver accurate, high resolution observation images which show every specimen in minute detail.

### A range of objectives to suit every specimen and every application

• *Superior image flatness:*

The DFPlan objective series accurately reproduces the original shape of the specimen.

• *Longest working distance (W.D.) in this class:*

The objectives range from the SZX-ACH1x (90mm W.D.) to the DFPL0.5x (198mm W.D.). As a result, even specimen surfaces which are difficult to access can be observed easily.

• *Ideal for high magnification:*

Superior quality image is ensured up to 336x, by combining a 2x objective with 30x eyepieces.

Galilean optics feature two (right/left) independent and parallel zoom optical paths to produce the focal point with one objective lens. The system enables high optical performance as well as functional modularity.

### “Comfort View” eyepieces for greater comfort and faster work

Quick, comfortable observation and documentation are ensured by this completely new eyepiece design featuring Pupil Aberration Control and Appropriate Positioning in the eye point.

### Accurate color reproduction

The careful selection of lens surface coating and glass materials in the entire optical system make it possible to observe and document specimens in their original, authentic colors.

### Sharp, clear, high-contrast images

The low, suppressed field curvature ensures accurate reproduction of original specimen shapes.

### A wide variety of observation tubes and intermediate tubes enable operators to obtain precisely the right image

Various different types of tubes are available, and can be freely combined to create the ideal system for any specified purpose.

### SZX7 tubes:

- |                                    |  |
|------------------------------------|--|
| • Aperture diaphragm unit / SZX-AS | • Macro tube / SZX-DA                    |
| • Beam splitter / SZX-BS           | • Photo adapter / SZX-PHA                |
| • Eyepoint adjuster / SZX-EPA      | • Side by side discussion tube / SZX-SDO |
| • Filter adapter / SZX-FAD         |  |

Aperture diaphragm unit / SZX-AS

① 45 degree binocular head / SZX-BI45 ② Tilting binocular head / SZX-TBI  
③ 30 degree trinocular head / SZX-TR30

# Precise, functional and compact — SZ61/SZ51

“A practical range of functions for observation and documentation in a compact stereo microscope body”  
The SZ61/SZ51, incorporating the Greenough optical system.

## 1:6.7 — the best zoom ratio in this class

The SZ61’s class-leading magnification range extends from 6.7 through 45x (using 10x eyepiece), with a zoom ratio of 1:6.7. This derives from the newly developed optical system and allows quick, comfortable observations at the most appropriate magnification. The SZ51 provides a magnification range from 8x through 40x (using 10x eyepiece), with a zoom ratio of 1:5.

## Outstanding depth of focus and flatness

The 10-degree angle convergence of the image forming path in the Greenough optical system secures excellent image flatness with deep depth of focus.

## “Comfort View” eyepieces for greater comfort and faster work

Quick, comfortable observation and documentation are ensured by this completely new eyepiece design featuring Pupil Aberration Control and Appropriate Positioning in the eye point.

## Accurate color reproduction

The careful selection of lens surface coating and glass materials in the entire optical system make it possible to observe and document the specimen in their original, authentic colors.

## Sharp, clear, high-contrast images

The low, suppressed field curvature ensures accurate reproduction of original specimen shapes.

*The Greenough optical system has two zoom optical paths inclined at an inward angle. This enables a more compact microscope design while maintaining high performance.*

## Five zoom body variations with high performance

The SZ61 and SZ51 zoom bodies provide two different magnification ranges. They are available with an ergonomically designed 45-degree inclination tube for the use on the standard stands. For special applications where the zoom body has to be tilted for use with other equipment or mounting on a universal stand, models with 60-degree inclination tube (SZ61-60/SZ51-60) are available. For documentation purposes, OLYMPUS also offers the SZ61TR, which incorporates a trinocular tube for easy attachment of digital and video cameras.

## Wide choice of auxiliary objectives

A wide choice of auxiliary objectives enables observations at magnifications from 1.6x to 270x and W.D. up to 400mm to comply with every application purpose.

# Work more comfortably...and more productively

The Olympus approach to ergonomic design seeks to achieve improvements that make work easier, more comfortable, and more productive, all at the same time. That means applying advanced technological methods to maximizing operability, reducing factors that contribute to operator fatigue, and building in effective safety features like ESD design.

**Ergonomic design based on 3D CAD analysis**

The microscope body and stand feature a design of precisely curved contours developed through careful 3D CAD analysis. Key ergonomic features include an all-round finish that’s smooth to the touch and helps to reduce fatigue in long period observations.

**Convenient front-access operation**

Improved ease of access to the most frequently used knobs and switches maximizes operator comfort and reduces back strain.

**Tilting binocular tube for comfortable observations (SZX7)**

A comfortable position that minimizes the risk of back strain and muscle tension promotes productivity and quality in routine inspection tasks. The continuously adjustable tilting binocular tube helps the operator to quickly find the most comfortable eyepoint position.

**Precise recall of specific magnification settings via integrated click-stop mechanism (SZX7) or zoom knob stopper (SZ61/SZ51)**

Many inspection tasks require the use of the same zoom magnification setting to ensure consistent and comparable

results. The integrated click-stop mechanism provides quick and easy access to this important function. The zoom knob stopper allows the user to choose magnification that can be quickly repeated, and the setting in use is clearly displayed on the front control panel.

**New eyepiece reduces fatigue and excludes dust**

This eyepiece features a pupillary aberration control mechanism whereby the image remains visible even if the operator’s eyes move. This has been found to lessen operator fatigue in long lasting observations. The unique eyepiece mounting design excludes dust particles and keep the eyepiece firmly in place ensuring clear images and best eyepiece position.

**ESD safety design**

The increasing miniaturization and complexity of electronic devices raises the risk of damage by electric shock caused by electrostatic discharge. For this reason, OLYMPUS has taken special measures to design its stereo microscope bodies and main accessories to discharge static electricity from 1000V down to 10V in less than 0.2 seconds, protecting the equipment and preventing damage to samples.

LED Transmitted / Reflected Light Illumination Stand

# OLYMPUS light solutions maximizes visibility in different tasks

OLYMPUS offers a range of light solutions perfectly tuned to the optical system of the zoom stereo microscope, to maximize the visibility of even minute characteristics.

## The new LED integrated reflected/transmitted illumination stand

The world’s first universal reflected/transmitted light LED illumination stand brings together all the advantages of LED technology. It allows the simultaneous use of reflected and transmitted illumination, and can alter their respective intensities continuously and separately by means of convenient dials on the stand. The use of super slim, high-brightness LED’s successfully integrates transmitted illumination in a very slim base just 25mm thick that allows easy specimen access and manipulation. The complete microscope including LED integrated stand is extremely lightweight, compact and easy to carry.

## Universal reflected illumination systems

Fiber optic illumination systems offer the highest illumination quality and flexibility. OLYMPUS offers a compact, cost effective 22W light source (SZ2-LGB) and a 100W light source (LG-PS2\*) for professional use. Homogeneous illumination can be achieved by a ring light. For special contrast effects on free form 3D shapes, OLYMPUS offers a choice of single and double self supporting spot illumination fiber guides and precisely adjustable flexible fiber guides.

\*An equivalent model may be offered in some markets.

Homogeneous light

## Transmitted light illumination systems

For all transparent materials as well as for background illumination for the inspection of through holes, the OLYMPUS choice of illumination stands ranges from simple brightfield/simple oblique (SZX-ILLK) up to brightfield /darkfield (SZX-ILLD2) and brightfield /oblique Koehler (SZX-ILLB2) illumination models. Also available is a brightfield/oblique illumination attachment (SZ2-ILA) that can accommodate various light sources including a 100W halogen lamp housing.

Darkfield light

## Special Illumination Techniques

### Looking into holes

OLYMPUS offers effective coaxial illuminators for the SZX7 (SZX-ILLC) and the SZ61/SZ51 (SZ2-ILLC) which direct the light through the microscope’s optical axis onto the specimen.

Coaxial light

### Mirrored Surfaces

The illumination of highly reflective specimens needs special techniques in order to avoid disturbing light reflections. For spot and ring light illuminators as well as for coaxial

Polarized light.

illuminators, OLYMPUS offers dedicated polarizing equipment which eliminates such light effects (LG-R66PL for ring light illumination).

## Making stress in transparent materials visible

Also available are simple and advanced transmitted illumination stands with polarizing equipment (SZX-AN, SZX-POL and SZ-POL2) for the efficient evaluation of tensions in transparent materials like plastic and glass. Their ease of use allows continuous, reliable production control of processes like injection molding.

## Others:

- Fluorescence excitation illuminator SZX-RFL2 (OLYMPUS offers dedicated filter sets for the inspection of resist, concrete and microcracks)

The transmitted/reflected integrated LED illumination stand’s slim body and easy operation enables quick observations in a comfortable posture.

Flexible angle of LED light source

Homogeneous, single and double spot illuminations fiber optic systems

Transmitted and coaxial illuminations with fiber optic systems High power fiber optic illumination system

Digital imaging

SZX7+SZX-TR30+DP70

Digital camera DP70 (SZX7, SZ61-TR)

By combining Olympus digital camera technologies originally developed for the consumer market with special high-speed processing hardware, images with up to 12.5 million pixels can be captured at high speed (around 3 seconds) while fully maintaining image quality, accuracy and color fidelity. The DP70 employs a 2/3 inch CCD.

Microscope digital camera DP12 (SZX7, SZ61-TR)

Compact overall design, with palm-size multi-function control unit integrating a 3.5" LCD monitor with 200,000-pixel display, and a small footprint that makes it easy to install and lay out any necessary auxiliary equipment. The 3.34 million-pixel and 1/1.8 inch progressive scanning CCD system ensures highly precise digital images which can be stored at a maximum resolution of 2048x1536.

SZ61+CAMEDIA Micro Imaging System

CAMEDIA Micro imaging system

A simple adapter enables an Olympus CAMEDIA digital camera to be attached to the eyepiece of a binocular body — an easy, practical and cost-efficient means of obtaining digital images.

Wide range of accessories to meet the needs of every application

Easy mounting with other equipment (bonder and prober arms)

The SZX7, SZ61 and SZ51 are designed to be integrated into process equipment. OLYMPUS offers various bonder and prober arms for all common brands.

① B & L style bonder arm / SZ-STB1 ② Bonder arm / SZ-STB2 ③ Bonder arm / SZ-STB3 ④ Prober arm / SZ-STP ⑤ Arm / SZ-ST5 ⑥ Adapter for B & L bonder arm / SZ-BLAD

Ergonomic low positioned focus handles

With the focusing unit SZ2-FO, focus adjustment can be done with the hands resting on the work surface. The action of focusing requires minimal force as the microscope zoom body does not need to be moved. This allows prolonged work on difficult samples without fatigue.

SZ2-FO

Various universal stands

A variety of universal stands are available for the observation of large size specimens. No matter how big the samples are or how much they vary in size, OLYMPUS has the right choice of stands to suit any requirements.
